

making connections, making a difference

4th International VdT Model of Creative Ability conference

8 July 2015, London

making connections, making a difference

What it takes to learn the model and the importance of getting visual - Wendy Sherwood

In a study using the VARK inventory, analysing preferred learning styles in Allied Health students, Good et al. 2013 found that most students (up to 64%) preferred a multimodal style of learning incorporating visual, aural, reading/writing and kinaesthetic styles into their learning processes. (info from Kayleigh Tudor)

making connections, making a difference

What it takes to learn the model and the importance of getting visual

- A visual representation of the model is needed
- Aid service users, OT students, OTs and other disciplines

making connections, making a difference

What it takes to learn the model and the importance of getting visual

The graphic representation of a theory is called a model. The parts of a model should correspond to ...the parts of the theory they represent (Walker and Avant 2005).

What could a visual representation of the VdTMoCA look like?
